

JAN 12 2007

January 11, 2007

Dr. Ellen Magid
USDA, Animal Care
920 Main Campus Drive, Suite 200
Raleigh, NC 27606

Dear Dr. Magid:

This letter is to inform you of a noncompliance that occurred yesterday at the Cleveland Clinic Lerner Research Institute (A3047-01, USDA # 31-R-0017).

The noncompliance involved an approved protocol using a canine model of cerebral aneurysm. The incident involved one dog. A procedure was performed (intracarotid injection of coils for the purpose of embolization of the experimental aneurysm). Although the creation of the aneurysm model was approved by the IACUC in this protocol, this specific experimental procedure involving injection of coils was not approved. In addition, this procedure was done in a workshop format involving physician training of sales personnel for the commercial sponsor producing the coils. Our IACUC has a policy that workshops involving animals are not approved if it is for the exclusive purpose of training sales personnel. We do approve workshops for physician training for new devices.

The IACUC became aware of this incident when the IACUC Office received a fax that was sent by PETA to the coil manufacturer. A copy of the fax is enclosed. We have been informed by the Media Relations unit at the Cleveland Clinic that PETA has also communicated with The Cleveland Plain Dealer newspaper, and that an article will be published in the January 12 morning edition.

Our institution is committed to take appropriate action concerning the investigators involved in this incident. The CEO, the Chief-of-Staff and the Office of the General Counsel have all played an active role in assessing this situation over the last 24 hours. I will send you a follow-up letter informing you of the corrective actions that will be taken.

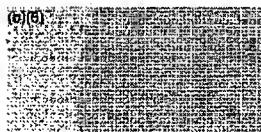

Sincerely,

(b)(6)

JAN 22 2007

January 19, 2007

Dr. Ellen Magid
USDA, Animal Care
920 Main Campus Drive, Suite 200
Raleigh, NC 27606

Dear Dr. Magid:

This is a follow-up to the letter that I sent to you on January 11, 2007 concerning a protocol noncompliance that occurred on January 10, 2007 at the Cleveland Clinic Lerner Research Institute (A3047-01, USDA # 31-R-0017).

The IACUC convened a meeting to discuss the noncompliance on January 18, 2007. A quorum of the IACUC was present. After lengthy discussion, the IACUC unanimously recommended to me in my capacity as the Institutional Official, the following corrective measures:

1. The investigator directly responsible for the noncompliance will not be allowed to perform research involving animals for a period of two years starting from the date of the noncompliance.
2. All investigators involved in endovascular research will be required to complete a rigorous retraining program before they will be allowed to perform animal research.
3. The endovascular research group will be required to develop a formal internal set of guidelines involving animal research. This will include internal checks and balances designed to prevent a future noncompliance.

In addition to these corrective actions recommended by the IACUC, the Institution has delineated additional corrective measures to reflect the seriousness by which the Institution has viewed this noncompliance. I would be happy to provide any additional information that you might require regarding this issue.

Sincerely,

JAN-29-2007 12:05

INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

(d) IACUC review of activities involving animals.

(1) In order to approve proposed activities or proposed significant changes in ongoing activities, the IACUC shall conduct a review of those components of the activities related to the care and use of animals and determine that the proposed activities are in accordance with this subchapter unless acceptable justification for a departure is presented in writing; Provided, however, That field studies as defined in part 1 of this subchapter are exempt from this requirement. Further, the IACUC shall determine that the proposed activities or significant changes in ongoing activities meet the following requirements

****There was a procedure conducted on a dog that was not done under an approved protocol. The procedure was done for the training of corporate sales people. The physician ordering the animal utilized an approved research protocol with no training component to request the animal be delivered to the lab. This animal had been purchased from a licensed dealer and had the initial preparatory surgery for the originally intended research protocol. The Doctor diverted the animal to his use for the training program he was conducting. This is a violation of the regulations requiring that all animal usage be conducted under approved protocols following the delineated guidelines set down for research and mandated by law. These guidelines are designed to prevent animal wastage and to protect the animals from unnecessary pain and distress.

The research facility has conducted a thorough investigation and provided an adequate response in both disciplinary actions for this individual and additional training and checks and balances to attempt to prevent any future incidences of this nature.
Corrected

2.33 (b) 1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

(b) Each research facility shall establish and maintain programs of adequate veterinary care that include;

(1) The availability of appropriate facilities, personnel, equipment, and services to comply with the provisions of this subchapter

****The surgical area where this procedure took place is extremely cluttered with one very large wood packing crate, a wooden pallet and several cardboard boxes. These are all untreated and not readily cleanable in any way. This does not permit adequate cleaning to allow for sterile technique. There is also a large accumulation of outdated wrapped implements hanging on the wall and stored on the floor in boxes. This increases the clutter and difficulty in cleaning. This does not provide for adequate veterinary care for the animals utilized in this room.

Correct by: next use for animal research

2.31 (d X 1 X II)

INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

(ii) The principal investigator has considered alternatives to procedures that may cause more than momentary or slight pain or distress to the animals, and has provided a written narrative description of the methods and sources, e.g., the Animal Welfare Information Center, used to determine that alternatives were not available;

The section in the protocols for determining whether there were any alternatives to painful procedures did not adequately address the point in the following protocols: pigs - ARC#s 00766, 07493, dog - Arc #s 07349, 07627, 07438, 07906, primate - Arc#s 007481, 07748, Rabbit - Arc# 07739.

On all of these protocols only one search engine was used to search for alternatives to Painful Procedures. To conduct an adequate search and be sure that all reasonable possibilities are covered at least two different search engines should be used. They should be selected based on the topic to be researched. If a literature search is not available than an appropriate alternative must be used and documented.

This must be properly done to assure that all possible care is being taken to provide for the animals health and well being. All protocols must be checked, not just the ones that I have identified in this write up.

Note: the more recent protocols now use two search engines in their search strategy. it is just the older protocols that have this problem.

Correct by: 7/1/06

3.11 (c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

(c) Housekeeping for premises. Premises where housing facilities are located, including buildings and surrounding grounds, must be kept clean and in good repair to protect the animals from injury, to facilitate the husbandry practices required in this subpart, and to reduce or eliminate breeding and living areas for rodents and other pests and vermin. Premises must be kept free of accumulations of trash, junk, waste products, and discarded matter. Weeds, grasses, and bushes must be controlled so as to facilitate cleaning of the premises and pest control, and to protect the health and well-being of the animals.

Clutter in the surgical rooms and hallway. There was an excessive buildup of clutter in the hallways in the main operating room areas. This needs removed to permit adequate husbandry and prevent potential problems with pests. This is for the health and well being of the animals.

Correct by: 6/21/06

There was a pile of clutter on the floor in one surgery room during a non survival procedure on a pig. There was a table that could have been used to hold these supplies in one corner that was completely empty. These items need to be off the floor

2.31 (d) REPEAT NCI

INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

(5) The IACUC shall conduct continuing reviews of activities covered by this subchapter at appropriate intervals as determined by the IACUC, but not less than annually.

In 2003, 2004, and now 2005 the Cleveland Clinic IACUC reported errors in the annual review of their animal use protocols. This time it was protocol #~~1004~~ that should have been reviewed the end of August, 2004. This oversight was not noted until May, 2005. The necessary review information was not received until 5/16/05. The researcher claimed at the time that it was a duplicate of information sent prior to the end of August, 2004. There was one difficulty with the accuracy of that observation. The animals listed on the report were not received until mid September. The report itself was signed 5/16/05. Continuing ongoing reviews must be conducted at least annually of all animal activity. This is to maintain adequate control of ongoing research activities by the IACUC, to prevent animal harm, loss, or wastage.

REMAINS UNCORRECTED

Note, the following corrections are being implemented to prevent any reoccurrences of this incident:

- 1) A 90, 60, and 30 day reminder is being sent to each researcher in advance of the annual renewal information being required.
- 2) The first day of the month following the due date for their renewal the researcher is notified that no further activity is to occur until such time as they have contacted the IACUC and corrected this problem. When this notice goes up, salmon colored animal ID cards are placed on the animals, identifying them as belonging to the facility protocol. The caretakers will be monitoring for any unauthorized activity.
- 3) Taking too long to rectify the situation could result in the requirement to rewrite the entire protocol and pursue full IACUC approval.

One last item to be implemented is to check for the status of the protocol prior to the arrival of the animals. It is presently being checked at the time of ordering, but some orders take long enough that this status changes in between.
